STIC-Biotech/ChemLib U.S. Serial No. 09/669,187

Aloha!

Please search **SEQ ID NOS.: 73, 80, 81, 148, and 906** from U.S. Serial No. **09/669,187** v. all relevant databases, including interference. Please limit search results to oligonucleotides less than 50 nt in length, if possible. Place results on both paper and electronic format (i.e., disk, e-mail, etc.). Thanks!

Jeffrey S. Parkin, Ph.D. Primary Examiner Art Unit 1648 REM 3D39 2-0908

3C/8

The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention describes a method of treating non-allergic inflammatory disease comprising administering to a subject having or at risk of developing a non-allergic inflammatory disease an immunostimulatory nucleic acid for prevention or treatment of the disease. The method is useful for treating non-allergic inflammatory diseases, such as psoriasis, eczema, allergic context dermatitis, latex dermatitis or inflammatory bowel disease e.g., ulcerative colitis or Crohn's disease. This sequence represents an immunostimulatory nucleic acid
                                                                                                                                                                                                                                                                                        Treating non-allergic inflammatory diseases, such as psoriasis, ecze allergic contact dermatitis, latex dermatitis or inflammatory bowel disease by administering an immunostimulatory nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 20 BP; 0 A; 0 C; 8 G; 12 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       administering at least one antiangiogenic nucleic acid molecule. Also included is a kit comprising a first container housing the antiangiogenic nucleic acids, and instructions for administering them to a subject having a condition characterised by unwanted angiogenesis. The method is useful for inhibiting angiogenesis associated with solid tumour growth, tumour metastasis, precancerous lesion, rheumatoid arthritis, psoriasis, diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, intestinal adhesions, atherosclerosis, scleroderma and hypertrophic scars. The present sequence is an antiangiogenic nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting angiogenesis in a subject, involves administering at least one antiangiogenic nucleic acid molecule to the subject.
rubeosis; Osler-Webber Syndrome; myocardial angiogenesis; plaque neovascularisation; telangiectasia; haemophiliac joint; angiofibroma; wound granulation; intestinal adhesion; atherosclerosis; scleroderma; hypertrophic scar.

                                                                                                                   especially in a hypo-responsive subject. The present sequence represents an immunostimulatory nucleic acid of the invention.
The invention relates to a method of treating or preventing allergy or asthma which comprises administering to a subject a poly-G mucleic acid in an aerosol formulation. The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ss; non-CpG; immunostimulatory; non-palindromic; immune response; proliferation; differentiation; cytokine; antibody production; B-cell; plasmacytoid dendritic cell; immunomodulator; gene therapy; chronic myelogenous leukaemia; melanoma; Kaposi's sarcoma; renal cell carcinoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                Suppressing allergies, including asthma, rhinitis, urticaria and atopic dermatitis, in a subject, comprises administering a first and second dose of an immunostimulatory nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of suppressing a symptom of an allergic response in a subject by administering a first and second dose of an immunostimulatory nucleic acid that comprises a nucleotide sequence comprising 5'-cg-3', and where the second dose is administered from 1 day to 8 weeks after the first dose. The methods and compositions of the present invention are useful for the treatment or prevention of asthma and allergy, including rhinitis, urticaria and atopic dermatitis, using an immunostimulatory nucleic acid alone or in combination with other medicaments. They can also be used in preventing bacterial and viral infections. This sequence represents an oligonucleotide used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

This invention relates to novel immunostimulatory oligonucleotides that contain a non-palindromic sequence motif. Specifically, it refers to DNA coligonucleotides (without a CPG motif), which can stimulate an immune response in animals of the order of primate, including humans. The immune response is characterised by the proliferation, differentiation, cytokine cand antibody production in B-cells, as well as cell differentiation and cytokine production in plasmacytoid dendric cells. The present invention describes immunomodulator compositions that also comprise an antigen selected from, for example, viruses, bacteria, parasites, tumour cells and glycolipides. As such, these DNA oligos can be used in gene therapy for inducing B-cell activation, treating, preventing or ameliorating an immune system disorder or a tumoural disease including chronic myelogenous leukaemia, melanoma, Kaposi's sarcoma, and renal cell carcinoma. This oligonucleotide sequence is a non-CpG DNA oligo of the invention.

New immunostimulatory oligonuclectide comprising non-palindromic nucleic acid sequence motif, useful for inducing B-cell activation, treating, preventing or ameliorating immune system disorder or tumoral disease e.g.

The invention relates to a novel quantitative method for adding linear polynucleotide to solution containing a cation. The linear polynucleotide acceptor at lonear sequence with donor at one edge portion and acceptor at another edge portion. The optical detection is performed using this linear polynucleotide. The method of the invention is useful in medical fields such as clinical laboratory test and fields with cation fixed assay. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Detecting apoptosis comprises preparing a sample from which cells have been removed and detecting at least one of nucleolin and PARP-I in the
                                                                                                                                                                                   Quantitative method of cation for clinical laboratory test, involves adding linear polynucleotide containing telomere repeat sequence with donor and acceptor at edge portions, to solution containing cation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Guanosine-rich oligonucleotide GRO J, used in apoptosis detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Apoptosis; nucleolin; AIDS; cancer; neurodegenerative disease; autoimmune disease; infection; diagnosis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to method for determining neoplastic state of a cell, involves detecting the presence of plasma membrane nucleotide in the cell or quantifying the amount of plasma membrane nucleolin in the cell. The invention is useful for diagnosing pre-malignant cells, malignant cells and lung small cell carcinoma. The present sequence is a non-antisense oligonucleotide

The present sequence is that of guanosine-rich oligonucleotide GRO J, which can be used in the method of the invention. The method is for the detection of apoptosis. It involves preparing a sample from which cells have been removed, and detecting nucleolin and/or poly(ADP-ribose) polymerase (PARP-1) in the sample, where the sample is blood, serum, plasma, tissue, tissue culture medium or sputum. Detection of nucleolin involves detection of a complex between nucleolin and a nucleolin binding molecule, preferably an anti-nucleolin antibody or a GRO, such as GRO J, which is characterised as a good plasma membrane nucleolin-binding GRO. The method allows detection of excessive apoptosis in a subject suspected of having AlDS, a neurodegenerative disease, an ischaemic injury, an
                                                                                                                                                                                                                                                                                                                                                     autoimmune disease, a tumour, a cancer (especially endocervical adenocercinoma, prostatic carcinoma, breast cancer, leukaemia and nonsmall cell lung carcinoma), a viral infection, an acute inflammatory condition or sepsis (all claimed).

Treating cancer in a subject comprises administering to the subject a therapeutically effective amount of an anti-nucleolin agent and a carrier.

Disclosure, SEQ ID NO 28; 32pp; English.

The invention relates to treating cancer in a subject comprises administering to the subject a therapeutically effective amount of an anti-nucleolin agent and a carrier. Also included is a pharmaceutical composition comprising a nucleolin antibody or an inhibitory RNA against nucleolin, and a carrier. The method and antibodies, RNA and composition are useful for treating cancer, such as melanoma, lymphoma, plasmocytoma, sarcoma, glioma, thymoma, leukemia, hepatoma, or breast, prostate, colon,

This invention relates to a novel method for treating inflammation in a patient which comprises administering to the patient a composition comprising a GRO (guanosine-rich oligonucleotide). The invention may be useful for the development of compounds with an antinflammatory.

C analgesic, gynecological, hepatotropic, neuroprotective, nootropic, antisterinatic, antisterinatic, gastrointestinal-Gen. or antiuler activity whilst the disclosed sequence may prove useful for gene therapy. The methods are useful for treating inflammation associated with an acute inflammatory condition. The acute inflammatory condition is selected from primary dysmenorrhea, acute alcoholic liver disease and acute pancreatis. The inflammation may also be of Alzheimer's disease or associated with a chronic inflammatory disease. The chronic inflammatory disease is selected from rheumatoid arthritis, asthma, gastrointestinal tract disease, psoriasis, atherosclerosis, Crohns disease, ulcerative collisa alcohol, chronic alcoholic liver disease, non-alcoholic steatohopatitis and chronic pancreatitis. The present sequence is that of the oligonucleotide GRO J which was used during the development of the one-partition.
                                                                                                                                                              ö
liver, esophageal, brain, lung, ovary, or cervical cancer. The present sequence is a GRO (guanine-rich oligonucleotide) which binds to nucleolin (thereby inhibiting cancer cell growth).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating inflammation, e.g. acute or chronic inflammation such as rheumatoid arthritis, asthma, psoriasis, and atherosclerosis, in a patient comprises administering to the patient a composition comprising a

The folding of telomeric DNA into G-quadruplexes inhibits telomerase, the enzyme present in over 8% of tumor cells which adds nuclectides to telomeres, preventing them from reducing in length during cell division. The carbazole compounds of the invention may be used to treat telomererelated disease, e.g., cancer. Sequences ADZ25610-ADZ25619 represent DNA sequences capable of duplex or quadruplex formation which were demonstrated to be bound by a carbazole compound of the invention. The present sequence represents a G-quadruplex-forming DNA capable of being bound by a carbazole compound. Note: The specification states that this sequence forms a G-quadruplex structure; however, further details on how
                                                                                                                                                                                                                                                                                                                                                                            Telomere; stabilizer; telomerase inhibitor; cancer; neoplasm; cytostatic;

method has been developed for binding quadruplex nucleic acids. The method comprises contacting a quadruplex nucleic acid with a monoclonal antibody that selectively binds to quadruplex nucleic acid to form an antibody-quadruplex nucleic acid complex. The method can be used for detecting antibodies that bind to quadruplex nucleic acids and to collect antibodase that bind to quadruplex nucleic acids and to collect cartibodies that bind to quadruplex nucleic acids and to collect suitable for detecting, isolating and purifying quadruplex nucleic acids. The method is also suitable for detecting step can be carried out on a biological sample such as cerebrospinal fluid, tissues samples, blood samples or other sample cuspected of containing quadruplex nucleic acids from solutions and to purify aptamers from combinatorial libraries or heterospenous solutions, in particular to purify or detect DNN aptamers that specifically bind the thrombin molecule critical in the thrombin-catalysed, fibrin-clot cormation cascade of blood placelets. The antibodies can then be used to detect levels of a known therapeutic aptamer in a patient and monitor clearance and dosage levels in a treatment protocol involving the aptamer. The present sequence trepresents an oligonucleotide used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Quadruplex nucleic acid and antibody binding assay useful for detecting and purifying antibodies and nucleic acids from a biological sample.

The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT cerombinant protein or polynucleoride, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein preparation of hTRT with a telomerase RNA component; (C) detection of hTRT with a sample by binding a relevant probe to the sample hTRT RNA or protein in a sample by binding a relevant probe to the sample of mplifying the product and correlating the presence of complex or amplifying the product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (B) the use of an agent that causes an increase in cell correlation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the cancer of ageing or cancer. Inhibitors of telomerase activity can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of oppoliferation conditions especially cancer and ageing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 20; DB 2; Length 44;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a guanine rich sequence derived from the Oxytricha telomeric region. This sequence forms an unusual structure termed a Gquartet. The formation of this structure is monovalent cation dependant and is disrupted by high temperature. Sequences which share the guanine rich nature of this telomeric sequence may be used to inhibit human type II phospholipase A2 activity. Oligomocleotides such as these may also be used for inhibiting activity of HSV, HIV, human cytomegalovirus or influenza virus, or for treating inflammatory and neurological disorders caused by phospholipase A2 activity in cases of hyperproliferation, malignancy, cardiovascular disease and snake bite. They may also be used for inhibiting division of malignant cells by modualting telomere length, which may also retard aging. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, telomerase reverse transcriptase, hTRT; TRT; diagnosis, prognosis, cell proliferation, cancer; ageing; ribonucleoprotein; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New modified oligo-nucleotide contg guanine quartet - inhibits activity of viruses, e.g. HIV, and phospholipase A2 and modulates telomere length of chromosomes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT cast compound is a modulator of hTRT, by detecting the change in hTRT cast combinant protein or polymuclecide, on administration of the compound; (B) preparation of hTRT with a telomerase by contacting a protein of the TRT with a telomerase BNA component; (C) detection of the TRT with a telomerase BNA component; (C) detection of the TRT with a telomerase BNA component; (C) detection of the TRT with a telomerase BNA component; (C) detection of the TRT with a telomerase of RNA detection, camplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample, and (D) increasing the proliferation of a vertebrate cell by increasing hTRT castebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polymuclectide encoding C hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity and be used to the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity and be used to the presence of the product of the new methods protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a teecombinant protein or hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (C) preparation of recombinant telomerase by contacting a protein of the preparation of the compound; (C) detection of the hTRT with a telomerase RNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample of hTRT RNA or protein in a sample by binding a relevant probe to the sample complex formed or in the case of RNA detection, and detecting the product and correlating the presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT camplification product with presence of hTRT in the sample; and (D) corrected and correlating the proliferation of a vertebrate cell by increasing hTRT caperate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding the reflect of ageing or cancer. Inhibitors of felomerase activity and the new methods activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó
Human, telomerase reverse transcriptase, hTRT; TRT; diagnosis; prognosis; cell proliferation; cancer; ageing; ribonucleoprotein; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing.

```
The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein or protein in a sample by binding a relevant probe to the sample hTRT RNA or protein in a sample by binding a relevant probe to the sample of hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, and detecting the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT amplification product with presence of magine and increase in cell certebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (UYTE-)
```

```
The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polymucleotide, on administration of the compound; (C) preparation of recombinant telomerase by contacting a protein preparation of hTRT with a telomerase RNA component; (C) detection of the hTRT with a telomerase RNA component; (C) detection of the hTRT with a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, and detecting the product and correlating the presence of hTRT in the sample; and (D) increasing the product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT camplification preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicament fat inhibiting the hTRT can be used in the manufacture of medicaments for inhibiting the ceffect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present invention relates to a method for detecting differential methylation patterns in an helicase-like transcription factor (HLTF, also called HIPPIGA, Zbul, RUSHIA and Smarca) nucleotide sequence. The method involves obtaining samples from a patient and a healthy subject, assaying the samples for the presence of methylation within a nucleotide sequence and comparing the methylation patterns in the sample from the subject to those in the normal sample. HLTF modulator is useful for treating an HLTF-associated proliferative disease in a subject, where the disease is associated with methylation of an HLTF nucleic acid sequence, i.e. colon neoplasia and the compound induces HLTF expression. The method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention is useful in gene therapy. The present sequence is the human HLTF 5' unmethylated DNA fragment amplifying PCR primer.
                                                                                                                                                                                                                                                        Detecting differential methylation patterns in an HLTF nucleotide sequence, useful for diagnosing or treating colon neoplasia, comprises assay samples for the presence of methylation within a specific nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA methylation; HLTF; helicase-like transcription factor; HIP116a; RUSH1a; Smarca; proliferative disease; colon neoplasia; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human HLTF unmethylated DNA amplifying forward PCR primer, 1347UF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes the human SLC5AB protein (I), which is a cell surface protein. (I) has cytostatic activity, and can be used in gene therapy. (I) can be used in detecting and treating SLC5AB-associated cancer. e.g. colon cancer, breast cancer, thyroid cancer or stomach cancer. (I) is also useful in screening assays, predictive medicine and in diagnostic and prognostic assays. The human SLC5AB gene is located on chromosome 12. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA methylation, HLTF; helicase-like transcription factor; HIP116a; Zbul; RUSH1a; Smarca; proliferative disease; colon neoplasia; cytostatic; PCR;

                                                                                                                                                                                                                                      The present invention relates to a method for detecting differential methylation patterns in an helicase-like transcription factor (HITF, also called HIP116a, ZDu1, RUSH1a and Smarca) nucleotide sequence. The method involves obtaining samples from a patient and a healthy subject, assaying the samples for the presence of methylation within a nucleotide sequence and comparing the methylation patterns in the sample from the subject to those in the normal sample. HITF modulator is useful for treating an HITF associated proliferative disease in a subject, where the disease is associated with methylation of an HITF mucleic acid sequence, i.e. colon neoplasia and the compound induces HITF expression. The method of the invention is useful in gene therapy. The present sequence is the human invention is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAT28317-T28347 represent multi-G oligonucleotides. AAT28336-T28347 are multi-G oligonucleotides with multiple G strings, or G strings of 4 bases and over. These sequences are oligonucleotides of the invention. These sequences can be modified to become more nuclease resistant, using phosphorothioate, phosphorodithioate, or 3'-carbon modified links. To
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Multi-G oligonucleotide; antisense sequence; c-myb; nuclease resistant; phosphorothioate linkage; phosphorodithioate linkage; inhibitor; therapy; cell proliferation; smooth muscle cell; proliferation protein; vascular restenosis; arterial restenosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New modified oligo:nucleotide(s) contg. consecutive guanine residues -inhibit proliferation of smooth muscle cells, esp. to prevent arterial restenosis.
Detecting differential methylation patterns in an HLTF nucleotide sequence, useful for diagnosing or treating colon neoplasia, comprises assay samples for the presence of methylation within a specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

cultured smooth muscle cells that are arrested in the GO phase, are induced to proliferate in the presence of the multi-G sequence. The cultured smooth muscle cells used in this method are attached to a solid support, and growth arrest is achieved on a starvation medium, followed by transfer to a normal growth medium to induce proliferation. The compounds that provide over 50% inhibition at a set dosage are selected as being useful for inhibiting vascular restenosis. The multi-G oligonucleotides are used to inhibit proliferation of smooth muscle cells, such as to prevent arterial restenosis. These sequences are not antisense sequences, but are thought to work in a similar way. The sequences are thought to act by binding to protein in similar way. The proliferation process. Compounds containing these multi-G oligonucleotides are not toxic, and their effect on cell proliferation is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, telomerase reverse transcriptase, hTRT; TRT; diagnosis; prognosis; cell proliferation; cancer; ageing; ribonucleoprotein; primer; ss.

the sequence AATT. (Updated on 25-MAR-2003 to correct PN field.)

```
describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT by detecting the change in hTRT recombinant protein or polynuclectide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein properation of hTRT with a telomerase RNA component; (C) detection of the TRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample, and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits or ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence is that of the target sequence #4 which was used in an experiment to determine the in vitro cleavage of target duplexes to evaluate the lengths of purine and pyrimidine tracts which are useful in obtaining oligonucleotides capable of triple helix formation with target nucleic acids. The complementary strand overhangs the 3 and by the sequence CTAG and the sense strand overhangs the complementary strand by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                high telomerase activity. The strand runs 3' to 5' in an antiparallel orientation and when targeted to a specific sequence will deactivate it. This allows for growth inhibition in cancerous cells, manipulation of cellular structural protein content; inhibition of IL-2 chain receptor; disbursing plaque formation in Alzheimer's disease, inhibiting EGF gene; modulating cholestrol synthesis through the HMGCoA gene; suppressing NGF gene expression; arresting HSV-I replication and suppressing Beta-globin expression in thallassaemia and sicle cell anaemia patients. The APP770 gene is the precursor protein responsible for production of plaque in Alzheimer's disease. Expression of this gene may be prevented by the formation of a triplex between the duplex target DNA sequence and an anti parallel or parallel synthetic oligonucleotide. A suitable target sequence is that from base -434 to -407 of the APP770 gene and a suitable antiparallel synthetic oligonucleotide sequence is shown. See also AAQ36219-362. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The APP770 gene is the precursor protein responsible for production of plaque in Alzheimer's disease. Expression of this gene may be prevented by the formation of a triplex between the duplex target DNA sequence and an anti parallel or parallel synthetic oligonucleotide. A suitable target sequence is that from base -434 to -407 of the APP770 gene and a suitable parallel synthetic oligonucleotide sequence is shown. See also AAQ36219-362.                                                                                                                                                                                                                                                                                                                       The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polymucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein or protein in a sample by binding a relevant probe to the sample hTRT RNA or protein in a sample by binding a relevant probe to the sample of hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT captebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polymucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to the asset of the lower of the lower activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; telomerase reverse transcriptase; hTRT; TRT; diagnosis; prognosis; cell proliferation; cancer; ageing; ribonucleoprotein; primer; ss.
                                                                                                                               Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present sequence represents a primer from the present invention which describes human telomerase transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT test compound is a modulator of hTRT, by detecting the change in hTRT crecombinant protein or polynucleotide, on administration of the compound; (C) preparation of hTRT with a telomerase by contacting a protein of the hTRT with a telomerase By contacting a protein of the hTRT with a telomerase By contacting a protein of the hTRT with a telomerase RNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample complex formed or in the case of RNA detection, and detecting the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT can agent that causes an increase in cell capters ageing. A protein preparation of hTRT and the polynucleotide encoding the treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           유
                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein preparation of hTRT with a telomerase by contacting a protein protein in a sample by binding a relevant probe to the sample hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the product with presence of hTRT in the sample; and (D) increasing the product with presence of hTRT in the sample; and (D) corrected in the use of an agent that causes an increase in cell expression; and (E) the use of an agent that causes an increase in cell expression; and (E) the use of an agent that causes an increase in cell expression; A protein preparation of effect of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used in the manufacture of medicaments for inhibiting the protein preparation of the polymcleotide encoding hterefore of ageing or cancer. Inhibitors of telomerase activity can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; telomerase reverse transcriptase; hTRT; TRT; diagnosis; prognosis; cell proliferation; cancer; ageing; ribonucleoprotein; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                               Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing

The present sequence representations by present the present into present and secribes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a cast compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polymucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein or preparation of hTRT with a telomerase by contacting a protein of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplification product with presence of hTRT in the sample; and (D) increasing the presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT certebrate cell proliferation to create a medicament that inhibits againg. A protein preparation of hTRT and the polymucleotide encoding C hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present sequence represents a primer from the present invention which

                                                                                                                                                                                                                                                                                                                                       The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ00812) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for flagmosting a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Regulatory sequence; eukaryotic protist; telomere; alpha-tubulin; primer;
                                                                                                                                                                                                              New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.

protists comprises a sequence (I) encoding a protein and having, at its 3, and 5, ends, native flanking regulatory sequences (RS) selected from stylonychia lemmes and with terminal telomeric sequences. (A) are used for production of proteins in protists, particularly functional heterologous proteins. (A) provide overexpression of foreign proteins in protists, e.g. at 7-15% of total proteins. Bukaryotic protists can be grown simply and on a large scale to high cell density with short generation times and have metabolic and other properties similar to those of multicellular organisms (contrast prokaryotes). In the macronucleus genome of protists, most genes are amplified, resulting in high expression rates even under normal conditions. This sequence represents a primer used in the construction of the expression vector described in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel expression vector (A) for eukaryotic prolists comprises a sequence (I) encoding a protein and having, at its 3 and 5' ends, native flanking regulatory sequences (RS) selected from Stylonychia lemmae and with terminal telomeric sequences. (A) are used for production of proteins in protists, particularly functional heterologous proteins. (A) provide overexpression of foreign proteins in protists, e.g. at 7-15% of total proteins. Eukaryotic protists can be grown simply and on a large scale to high cell density with short generation times and have metabolic and other properties similar to those
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expression vector functional in eukaryotic protist, useful for expression of heterologous proteins, contains a coding sequence and regulatory flanking regions from a protist.
                                                                           for eukaryotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Identifying differentially methylated genomic CpG dinucleotide sequences associated with cancer, comprises measuring level of methylated genomic CpG dinucleotide sequences for genomic targets in sample and comparing to reference level.

Example 4; Page 17; Opp; English.

Claim 28; SEQ ID NO 1411; 89pp; English.

The invention relates to a mehtod of identifying differentially methylated genomic CpG dinucleotide sequences associated with cancer, comprising measuring the level of methylated genomic CpG dinucleotide equences for two or more of the genomic targets in sample, and comparing the level of methylation at genomic CpG dinucleotide sequences in the sample to a reference level of methylated genomic CpG dinucleotide sequences in the sample to a reference level of methylated genomic CpG dinucleotide sequences associated with cancer in an individual. The level of methylation of the differentially methylated genomic CpG dinucleotide sequences is used to diagnose cancer in the individual, predict the course of cancer, predict the susceptibility of cancer, stage the progression of cancer, predict the likelihood of overall survival, and predict the likelihood of recurrence of cancer for individual. The level of methylation of the differentially methylated genomic CpG dinucleotide sequences in the sample is also used to determine the effectiveness of a treatment course undergone by the individual. The cancer is preferably adenocarcinoma or squamous cell carcinoma. The probes are useful for detecting methylation of genomic CpG dinuclectide sequences of two or more genomic targets. The present sequence represents a CpG site probe. 

```
Detecting an indicium of a disease in a heterogeneous biological sample comprises contacting the nucleic acid sample with an agent that modifies unmethylated cytosine, and detecting hypermethylated or hypomethylated

The invention relates to detecting an indicium of a disease in a heterogeneous biological sample. The method involves (a) isolating a heterogeneous nucleic_acid sample comprising a CpG-containing target template from a heterogeneous biological sample; (b) contacting the nucleic acid sample with an agent that modifies unmethylated cytosine; (c) performing an amplification reaction on the target template using at least one chimeric primer that comprises a first portion that is not specific for the target template and a second portion, where the second portion is specific for the first or option, where the second portion is specific for the CpG-containing target template if the template comprises an unmodified cytosine at predetermined position; and (d) detecting the presence of an amplification product as an indicium of a disease. The method is useful for detecting indicia of cancer in a biological sample, for detecting cancer detection, for infectious disease diagnostics. The new method makes it possible to detect a disease disease diagnostics. The new method makes it possible to detect a disease according of hypermethylation at multiple loci, which milling and makes it possible to detect a disease assaying of hypermethylation at multiple loci, which indicate a higher risk of colorectal cancer

The invention relates to a novel quantitative method for adding linear polynucleotide to solution containing a cation. The linear polynucleotide contains telomere repeat sequence with donor at one edge portion and acceptor at another edge portion. The optical detection is performed using this linear polynucleotide. The method of the invention is useful in medical fields such as clinical laboratory test and fields with cation fixed assay. The present sequence is used in the exemplification of the
adding linear polynucleotide containing telomere repeat sequence wi
donor and acceptor at edge portions, to solution containing cation.

The linear polynucleotide contains telomere repeat sequence with donor at one edge portion and acceptor at another edge portion. The optical detection is performed using this linear polynucleotide. The method of the invention is useful in medical fields such as clinical laboratory test and fields with cation fixed assay. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                 Quantitative method of cation for clinical laboratory test, involves adding linear polynucleotide containing telomere repeat sequence with donor and acceptor at edge portions, to solution containing cation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ008152) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for predicting a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheeumatoid arthritis, osteoarthritis or cytomegalovirus infection
                                                                                                                                                                                                                    17, leukocyte; gene expression profiling; allograft rejection; atherosclerosis; congestive heart failure; systemic lupus erythematosus; rheumatoid arthritis; osteoarthritis; cytomegalovirus; infection; probe;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acides can be pyrimidine rich (py-rich) or thymidine (T) rich The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae) had not compositive, bacterial antigens (e.g. toxoplasma, and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is stable useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Thi immune response and to activate immune cells. Note: the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
